## Download

As with all other iPhone / iPod Touch applications the App can only be downloaded through Apple's App Store. Use iTunes or your device to download the App.

The direct link for the App is **<http://iTunes.com/app/iJoyRadio>**

The application is free of charge.

## User Manual

This section describes how to use the iJoyRadio App (current version 11.002).

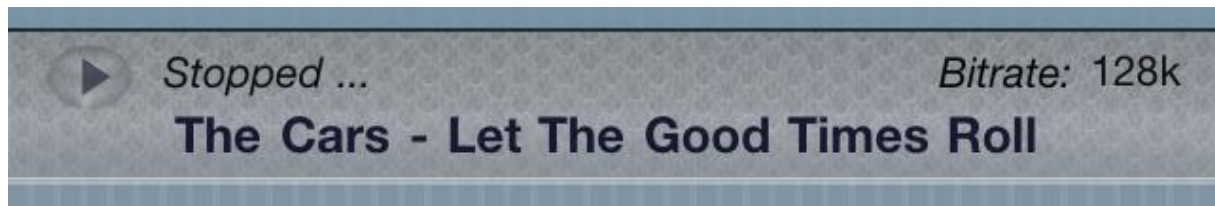

When starting the App a splash screen is shown and the iJoyRadio App Jingle is being played. The main navigation Tab control is displayed at the bottom of the screen. In this version two tabs are shown.

*The Webradio tab*

The webstream can be started through the big main button in the centre of the screen. It is also possible to use the small button next to the song title.

The information panel at the top of the screen displays the status of the player. This can be 'Now Playing ...', 'Stopped ...' or 'Buffering ...'

The bitrate of the stream is shown at the right side of the screen. The song title is shown just below.

The master volume slider is, of course, used to adjust the audio volume level. This control has the same function as the device buttons. It will always reflect the true audio volume of the iPhone / iPod Touch.

## The about tab

In the About tab information about the app is shown, like the version number and such. The audiostream can also be stopped and started from this tab through the button in the upper left part of the screen.

## Support

If you have any questions about the app, or have detected a fault or bug, please contact the developer at: [erik@ijoyradio.com](mailto:erik@ijoyradio.com).

If you have any suggestions for functionality please contact us. We like to hear your ideas.
